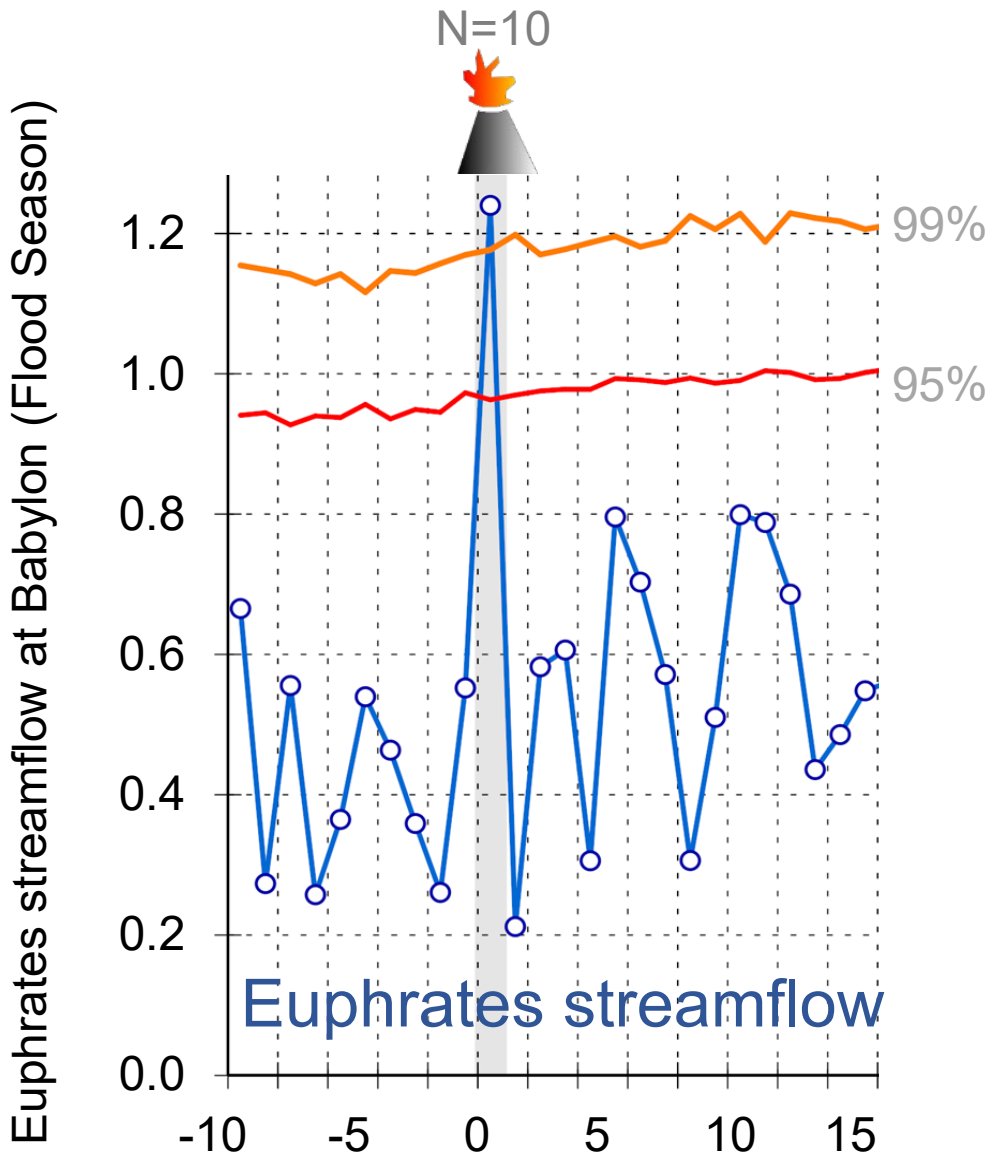
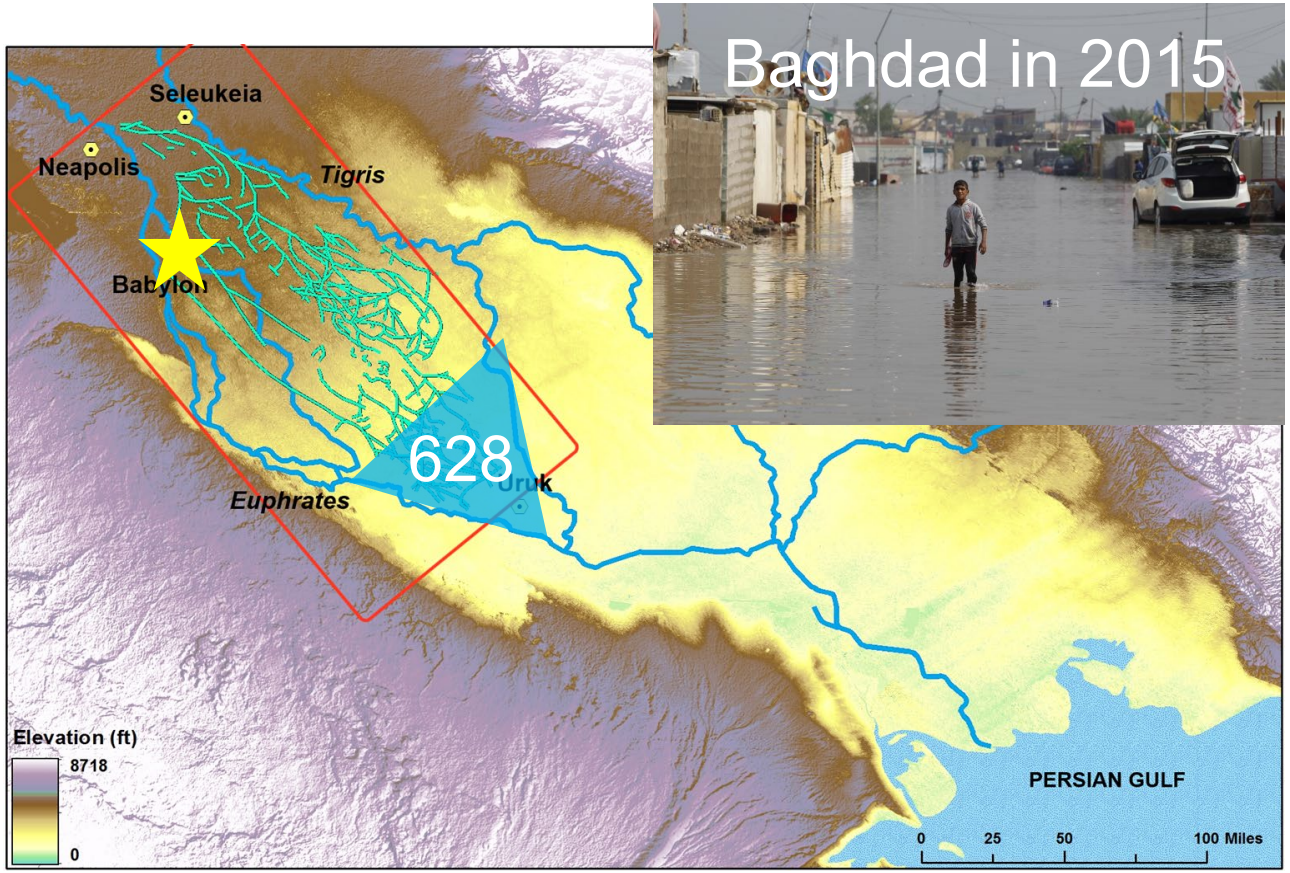
Gilgamesh is the semi-mythic King of Uruk the hero of *The Epic of Gilgamesh* (c. 2150-1400 BCE)

Gilgamesch, by Walter Jonas 1943

Ludlow et al., EGU 2020





Arid Mesopotamia ("land between the rivers") is heavily dependent upon the Tigris and Euphrates rivers, with intense innovation in irrigation networks (canals, dykes, basins).

The region is prone to floods e.g. in 628 CE to the south of Wāsit, following a large volcanic eruption from October 626-27 CE.

June-August (Y_{+0}, Y_{+1}, 2-sigma Anomalies)

Learning from the Past

(1) “More must be done to **forecast** and try to **manage** globally disruptive volcanic eruptions. The risks are greater than people think!” (Cassidy & Mani, *Nature* 2022)

(2) Volcanic eruptions are more than just a “year without a summer”

(3) Often, it’s not the prominent “**celebrity volcanoes**” that matter (e.g. Thera, Vesuvius) but previously under-researched volcanoes (e.g. Katla, Okmok, Aniakchak)

Witterungsberichte Schweiz 1910 – 1919

Witterung im August

Der August war äussert trüb, kühl und niederschlagreich. Hinsichtlich der Temperatur ist er mit einem Wärmeausfall von über 3 Graden der kälteste August unserer annähernd 50jährigen offiziellen Beobachtungsreihe; nur im äussersten Südwesten des Landes (Genf), wo das Defizit etwas geringer war, lässt sich ein gleich kalter August (1896) nachweisen. (p. 4) Die Niederschlagsmengen betragen das 1 ½ bis 2 fache der langjährigen Mittelwerte; viel besser als durch die Niederschlagssummen wird die Witterung des diesjährigen Augustmonats aber charakterisiert durch die Niederschlagshäufigkeit: nur drei Tage blieben völlig niederschlagsfrei. Auch in Bezug auf die Bevölkerung stellte der Monat einen Rekord dar: er ist der trübste Augustmonat; das Mittelland hatte keinen einzigen hellen Tag. (p. 4) Die kältesten Tage waren diejenigen vom 7. - 9., am 7. schneite es bis auf zirka 1500 m herunter. (p. 4)

EVENT
Volcanic eruption in proximity to pinch point
ACTIVITY
Flank collapse, debris avalanche, or submarine landslide
Eruption of tephra column
Release of volcanic gases
Mass movement resulting in a tsunami in coastal areas
Pyroclastic Density Currents
Ash fallout to surrounding area
Ash and gases reach the upper atmosphere
Lahars (mudflows)
PRIMARY SYSTEM IMPACT
COMMUNICATION
Damage to undersea communication cables and communication network
TRANSPORT
Damage or prolonged closure of transportation network (Road, rail, air and sea ports)
INFRASTRUCTURE
Damage to critical infrastructure e.g. power plants, electrical grid, desalination plants, local communications networks and pipelines
CLIMATE
Climate anomaly causes global cooling
ENVIRONMENT
Inundation of surrounding land and contamination of water courses
CASCADING IMPACTS
Disruption to global financial markets and trade
Disruption to global trade network and 'just-in-time' supply chains while new trade routes are established.
Financial repercussions for recovery operations
Local and/or regional reduction in crop yields
Increased prices due to shortages of food, fuel and commodities
Financial repercussions for re-routing trade
Loss of GDP and currency destabilisation
Increased food prices due to shortages
Loss of GDP from reduced exports
