

SPI Technogrants

The SPI Technogrants offer funding for the development and testing of technologies relevant for research in polar and remote high-altitude regions.

Scientists of all career ages – from master's students to senior researchers – are eligible to apply if they are affiliated with a Swiss public research institution.

Collaborations with private companies and start-ups are encouraged.

Successful applicants can receive up to CHF 50'000 towards the project costs.

Calls for proposals are issued annually by the Swiss Polar Institute. SPI Technogrants are made possible thanks to funding provided by the Swiss Polar Foundation.
